JAMIA HAMDARD

Celebrating 30 Years of Excellence in Professional Education and Research with Empathy for all

INTERNATIONAL SYMPOSIUM ON INFECTIOUS DISEASES

12-14 Nov' 2018 at Delhi NCR, India

*Organized by
the Regional Centre
for Biotechnology (RCB)
and Jamia Hamdard (JH)*

About the symposium

Infectious diseases, with the evolution of new viruses and bacterial superbugs, pose a major threat to the mankind and nature. This symposium will discuss various contemporary issues in the infectious disease biology; and aims to

cover viruses such Japanese encephalitis, Dengue, Chikungunya, Hepatitis and HIV; and bacteria such as Mycobacterium tuberculosis, Salmonella typhi and Staphylococcus aureus which have shown reemergence in the recent past and are highly relevant in the Indian context. Eminent researchers from across the globe studying these pathogens will participate in the conference along with young researchers and students. The idea of a broad conference is to allow researchers from varied backgrounds to come under one roof to discuss their findings and identify provocative questions across the spectrum of infectious diseases. The sessions would enable thought-provoking discussions in broad themes from basic science to translation and application.
